

Bonus Task – Policy Proposal: Ethical AI in Healthcare

Title: Guideline for Responsible AI Use in Healthcare

Purpose

This policy ensures that AI systems deployed in healthcare respect patient rights, promote fairness, and enhance trust while maintaining high clinical standards.

Scope

Applies to all AI-driven healthcare applications developed or deployed by our team, including diagnostic tools, predictive models, and patient management systems.

Ethical Principles

- **Fairness:** AI must not discriminate based on race, gender, age, or socioeconomic status.
- **Transparency & Explainability:** All AI decisions must be interpretable to healthcare professionals and patients.
- **Privacy & Consent:** Patient data must be anonymized, securely stored, and collected with explicit consent.
- **Accountability:** Clear responsibility must be assigned for AI-driven decisions and outcomes.
- **Sustainability:** AI development should minimize energy use and environmental impact where possible.

Implementation Strategies

1. **Bias Mitigation**
 - Audit training datasets for underrepresented groups.
 - Apply fairness techniques (e.g., reweighing, threshold adjustments).
 - Monitor predictive outcomes regularly for disparate impact.
2. **Transparency & Explainability**
 - Document AI models, data sources, and decision rules.
 - Provide explainable outputs for clinicians and patients.
 - Maintain a log of all AI-driven recommendations.
3. **Consent & Privacy**
 - Collect informed consent before data usage.
 - Anonymize datasets and encrypt sensitive information.
 - Comply with GDPR, HIPAA, or local regulations.
4. **Accountability & Governance**
 - Assign human oversight for all AI decisions.
 - Maintain an internal review board to monitor ethical compliance.
 - Establish channels for reporting adverse events.

Monitoring & Continuous Improvement

- Use fairness metrics (e.g., disparate impact, equal opportunity difference).
- Perform periodic audits of AI performance and compliance.
- Update policies and mitigation strategies based on emerging best practices.
